• Education

B.Sc. in Information & Communication Engineering

Dongyang Mirae University, Seoul, South Korea (2015 – 2020)

• Skills

Operating Systems

- Linux (CentOS 6/7), Solaris

Infrastructure

- Apache, Tomcat, JEUS, JBoss
- Shell-based infrastructure automation

DBMS

- PostgreSQL, Oracle, MySQL, MSSQL, Tiberio, Cubrid
- Migration, encryption, HA

Security

- FIDO, TLS/SSL, Database encryption, SSO, MDM

Programming

- Shell, Python, Java

DevOps & Cloud (Hands-on)

- Docker: containerized Node.js service
- Kubernetes: deployment with liveness/readiness probes
- CI/CD: GitHub Actions for build and deployment validation

• Certifications

- Linux Master Level 2
- Engineer Information Processing
- Computer Specialist (Spreadsheet & Database)

• Languages

- Korean: Native
- English: Working proficiency
- German: B1 (certified)

SEULGI CHOI

Infrastructure & System Engineer

Permanent Residence in Germany · No sponsorship required

• Professional Summary

Infrastructure & System Engineer with 6+ years of experience across Korea and Germany, specializing in Linux-based enterprise infrastructure, databases, middleware, and security-critical environments. Built and operated enterprise infrastructure across WEB/WAS, database, and security environments, including air-gapped systems. Experienced in database migration, encryption, HA/DR, and FIDO-based authentication systems. Strong focus on infrastructure automation using shell scripting, including provisioning and deployment workflows. Hands-on experience with Docker, Kubernetes, CI/CD, and Terraform through personal DevOps projects.

• Work History

Apr 2024 –
Jun 2026

Software Engineer (Infrastructure / Platform)

QuinLogic GmbH – Aachen, Germany

- Created automation scripts to generate and load database data from Excel/CSV files in a Windows-based environment
- Automated transfer and deployment of solutions from test environments to production servers
- Implemented OAuth2-based authentication for internal APIs using containerized Keycloak
- Investigated and resolved application-level issues in a C#-based environment, collaborating with development teams

Mar 2023 –
Mar 2024

Infrastructure / DevOps Engineer

RaonSecure – Seoul, South Korea

- Supported 15+ enterprise projects involving database and middleware (WAS) integration
- Integrated FIDO and OTP authentication solutions with enterprise security systems
- Participated in DR switch testing and operated Linux-based internal servers
- Supported demo and test environment setup and operations

Oct 2018 –
Apr 2022

Infrastructure Engineer

Dream Security – Seoul, South Korea

- Built and operated secure Linux-based infrastructure (OS, WEB/WAS, DB, SSL) in enterprise and air-gapped environments
- Designed and implemented shell-based infrastructure automation, reducing system build and deployment time by 70%
- Performed database installation, migration, encryption, and high availability (HA) operations for enterprise systems
- Delivered security-critical projects involving FIDO authentication and database encryption under strict deadlines
- Developed internal support tools using the Spring Framework
